From Well Pad to Cloud in Five Minutes: Tosibox Showcases Oil and Gas Innovation at ENTELEC Conference

Tosibox selected to demonstrate breakthrough, integrated demo at conference's esteemed Innovation Lab

Oulu, Finland / Irving, Texas --- Tosibox, the global pioneer in providing solutions to connect, protect and control OT networks, has been selected as one of the featured breakthrough technologies at ENTELEC's Innovation Lab from May 19-22 in Galveston, Texas. Tosibox will show how to securely connect an entire well pad environment in just five minutes - versus the 4-8 hours required with traditional IT solutions.

The demonstration highlights Tosibox's role as an enabling technology for the oil and gas industry, easily integrating with solutions from industry partners including Siemens (PLC and HMI systems), Autosol (protocol conversion), Inductive Automation's Ignition (SCADA software), Starlink (satellite connectivity), and PLC Construction (system integration).

The live, full-stack demo will be presented by DJ Melancon, Oil & Gas Industry Leader at Tosibox, who shared, "This demo shows the real power of our platform. You literally plug it in, check a box, and in under five minutes you have a fully secure, connected OT network for oilfield operations. No complex configuration, no specialized IT skills required. We're taking deployment from hours to minutes."

The demonstration will show how Tosibox addresses the critical needs and challenges facing today's oil and gas industry:

- **Security:** With 67% of energy, oil and gas organizations experiencing ransomware attacks, minimizing OT network downtime and ensuring secure remote access across vast geographic areas remains essential. Tosibox provides automated cybersecurity with zero-trust architecture that protects against evolving threats.
- **Compliance:** Meeting regulatory requirements adds complexity and cost. Tosibox meets majority of TSA security guidelines out-of-the-box, significantly reducing compliance complexity for midstream companies.
- **Speed and Ease of Deployment:** Traditional solutions require extensive IT expertise, lengthy deployment times, and complex security configurations. Tosibox eliminates

these barriers through automated, plug-and-play setup that reduces deployment from 4-8 hours to under five minutes, requiring no specialized IT skills.

ENTELEC visitors are invited to booth 211 to see the Innovation Lab demonstration and learn how Tosibox is revolutionizing OT connectivity. The demonstration runs multiple times daily throughout the 2 / 2 info@tosibox.com | https://tosibox.com conference. For those unable to attend ENTELEC in person, the company has planned an exclusive webcast featuring the same live demo.

The webcast will take place on **Tuesday, June 10 at 12:00PM PT / 2:00PM CT / 3:00PM ET**. Spots are limited, and registration is available at the following link: [REGISTER HERE](#).

About Tosibox

Tosibox is the global pioneer in providing solutions to connect, protect and control OT networks. Since 2011, the company has deployed solutions to manage hundreds of thousands of end point devices and physical infrastructure, securing the associated data. With U.S. headquarters in Irving, Texas and global headquarters in Oulu, Finland, Tosibox serves 800+ direct customers globally and works with 200+ partners. The company's purpose-built OT cybersecurity platform enables rapid deployment, comprehensive visibility, and robust security that simplifies compliance and delivers measurable cost savings.
