

The fastest way to **connect**, **protect** and **control** OT networks and critical infrastructure.

Solution Brief

CONNECT, PROTECT AND CONTROL OT, IN MINUTES

A purpose-built cybersecurity platform for operational technology. Simple to deploy. Secure from anywhere.

As operational technology (OT) and information technology (IT) rapidly converge, organizations face a surge in cyber threats, regulatory pressures, and operational complexity. Most OT leaders have experienced security breaches, and compliance failures can lead to costly shutdowns and lost business. Traditional IT tools and DIY solutions fall short, leaving critical OT systems exposed and teams overwhelmed by complexity.

TOSI: THE PURPOSE-BUILT OT CYBERSECURITY SOLUTION

In direct response to these challenges, Tosi offers an integrated, turnkey platform specifically designed to put secure connectivity, security, and control of your entire OT network into your team's hands—no specialized expertise required.

Our patented solution includes hardware, software, and related services to quickly and securely connect, protect, and manage OT assets, all while minimizing complexity and accelerating speed, cutting deployment time by at least 50%.

HOW TOSI WORKS

Tosi's user-friendly design means employees can deploy and manage the system without specialized OT or IT expertise. Once implemented, authorized personnel can securely connect to and control critical assets from anywhere, enabling rapid response and significantly reducing downtime.

The resulting solution is highly scalable, supporting organizations ranging from those with just a handful of sites to enterprises with hundreds of locations with thousands of devices—demonstrated by proven results at global industry leaders in Critical Infrastructure, Manufacturing and Building Automation.

HOST ANYWHERE

Flexibly deploy the platform across any application environment.

NATIVE CLOUD INTEGRATION

Seamlessly integrate cloud-based applications, enhancing operational flexibility and control.

SECURELY CONNECT SITES

Establish secure connections rapidly, without specialized IT knowledge.

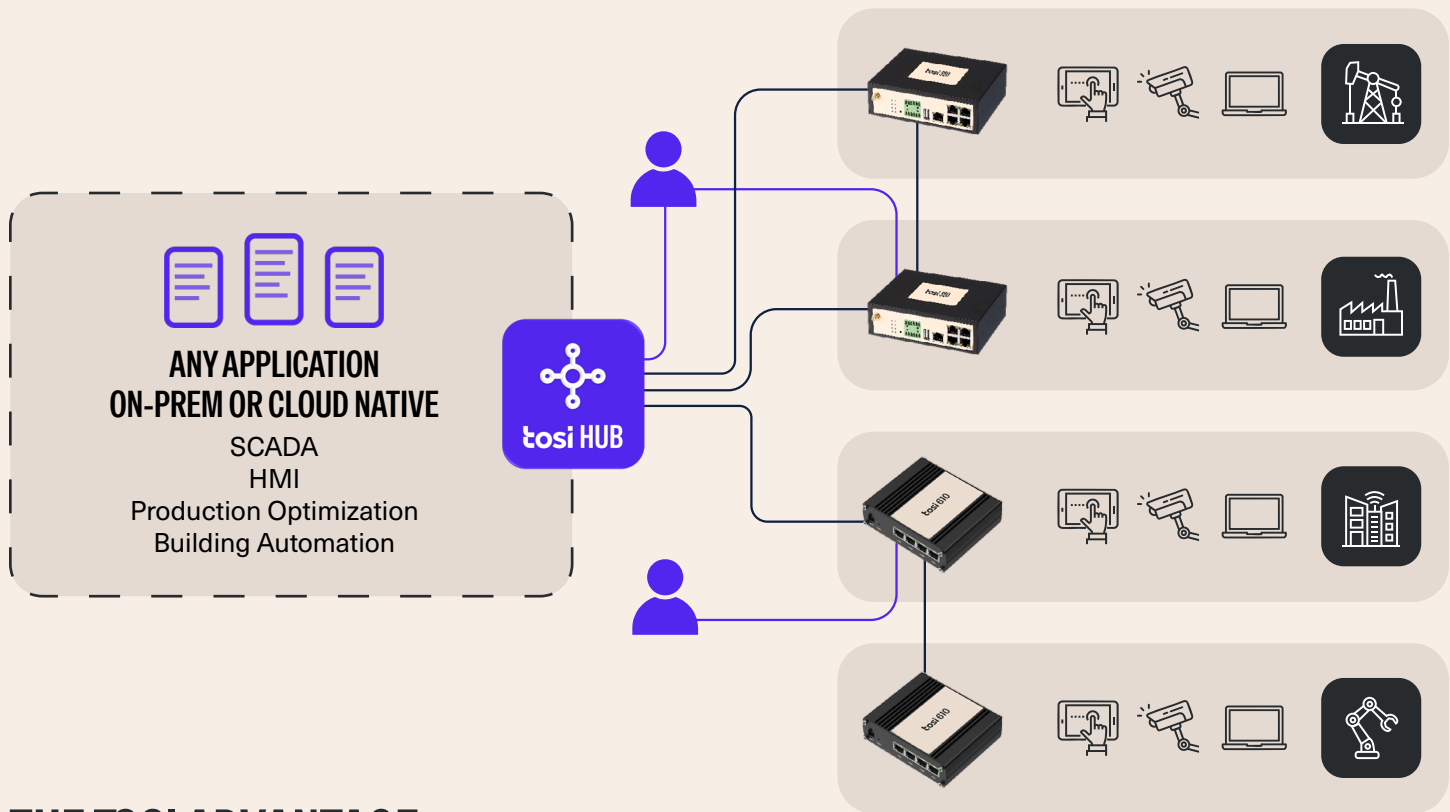

MONITORING AND ALERTING

Comprehensive OT asset visibility with security monitoring, prioritized alerts, and actionable mitigation recommendations.

SECURELY MANAGE ACCESS

Grant or disable user access securely in less than a minute.

A CLOSER LOOK AT THE TOSI SOLUTION

THE TOSI ADVANTAGE

RAPID DEPLOYMENT & CENTRALIZED CONTROL

- Automate deployment in minutes, regardless of existing infrastructure.
- Easily grant / restrict OT network access by the hour, the day, the individual
- **Proven results: 75% fewer site visits, 90%+ remote issue resolution, 50%+ technician efficiency improvement.**

SIMPLIFIED COMPLIANCE & ROBUST SECURITY

- Implement seamless network segmentation and access control.
- Meet industry regulatory standards effortlessly.
- **Proven results: Investment recovered within one month, significant reduction in compliance related downtime.**

COMPREHENSIVE VISIBILITY & ZERO TRUST ARCHITECTURE

- Gain full network visibility without external exposure, providing airgap-level security.
- Proactively detect and address anomalies remotely.
- **Proven results: 50% reduction in downtime, 60-80% faster response times, 99.9% system uptime.**

UNMATCHED ECONOMIC ADVANTAGES

- Substantial cost savings through operational efficiency improvements.
- 40-60% reduction in travel costs due to remote issue resolution capabilities.
- **Lower Total Cost of Ownership compared to conventional solutions, with ROI in less than a year.**
